A;Title: Amyloid fibrils derived from V-region together with C-region fragments from a A;Reference number: A24626; MUID:86077295; PMID:3935132
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AjAccession: A38923
AjAccession: A38923
AjAccession: A38923
AjAccession: A38923
AjAccession: A38923
AjAccession: A38923
AjAccession: Association
Ajaccession: Association
Cjacciation: 195;96-103
Cjacciation: This protein is derived from an immunoglobulin light chain of lambda type.
Cjacciation: This protein is derived from an immunoglobulin homology
Cjacciation: Immunoglobulin V region; immunoglobulin protein #status predicted <WAT>
F;7-83/Domain: immunoglobulin homology <IMM>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

CATALYTIC ACTIVITY: Cleaves aggrecan at the 1838-Glu-|-Ala-1839 site and versican at the 1428-Glu-|-Ala-1429 site.

1- COPACTOR: Binds 1 zinc ion per subunit (By similarity).

1- SUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).

2. ISUBCELLULAR LOCATION: Secreted. Associated with the extracellular matrix (By similarity).

3. Event-alternative splicing; Named isoforms-3;

3. Name=1; Synonyms=ADAMTS-9B;

3. Isold=Q9P2N4-1; Sequence=Displayed;

3. Isold=Q9P2N4-1; Sequence=USP 007548, USP 007549;

3. Isold=Q9P2N4-1; Sequence=USP 007548, USP 007549;

3. Isold=Q9P2N4-1; Sequence=USP 00600;

3. Isold=Q9P2N4-2; Sequence=USP 00600;

3. Isold=Q9P2N4-2; Sequence=USP 00600;

3. Isold=Q9P2N4-2; Sequence=USP 00600;

4. Isold=Q9P2N4-2; Sequence=USP 00600;

5. Isold=Q9P2N4-2; Sequence=USP 00600;

6. Isold=Q9P2N4-2; Sequence=USP 00600;

7. Isold=Q9P2N4-2; Sequence=USP 00600;

8. EXPRESSED SPECIFICITY: Highly expressed in all fetal tissues.

8. Expressed in a number of adult tissues with highest expression in head of the context of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               heart, placenta and skeletal muscle.
DOMAIN: The spacer domain and the TSP type-1 domains are important
for a tight interaction with the extracellular matrix (By

MEDLINE-98072426; PubMed=9409768; DOI=10.1016/S0378-1119(97)00424-1; Bertani L.E., Huang J.S., Weir B.A., Kirschvink J.L.; Bertani L.E., Huang J.S., Weir B.A., Kirschvink J.L.; Evidence for two types of subunits in the bacterioferritin of Magnetospirillum magnetotacticum."; Magnetospirillum magnetotacticum."; ele PUNCTION: May perform analogous functions in iron detoxification and storage to that of animal ferritins (By similarity).

monomer (Potential).
---SUBUNIT: Oligomer of 24 identical subunits (By similarity).
---MISCELLANBOUS: The di-iron binding site functions as active site where iron ions are oxidized from iron(II) to iron(III) before they are stored (By similarity).
---SIMILARITY: Belongs to the bacterioferritin family.
----SIMILARITY: Contains 1 ferritin-like diiron domain.

Novel human anti-Factor IX/IXa antibodies against IX/IXa gamma-carboxyglutamic acid domains useful as anti-coagulant in thrombosis, stroke, and post myocardial infarction.

Claim 8; Fig 2; 84pp; English.

This sequence represents a complementarity determining region 3 (CDR3) of the light chain variable domain of a human anti-factor IX/IXa Gla domain antibody. Factor IXA a vitamin K dependent plasma serime procease that participates in the blood coagulation pathways. The Gla domain of factor IXa and its zymogen factor IX contains important structural determinants for interaction with high affinity binding sites on vascular endothelial

```
the treatment or prophylaxis of thrombotic or cosquiopathic diseases or disorders in a mammal for which inhibiting a FIX/IXa mediated event is indicated, e.g. deep venous thrombosis, arterial thrombosis, unstable angina, post myocardial infarction, post surgical thrombosis, coronary artery bypase graft (CABG), percutaneous transluminal coronary angioplasty (PTCA), stroke, tumour growth, invasion or metastessis, inflammation, septic shock, hypotension, adult respiratory distress syndrome (ARDS), arterial fibrillation and disseminated intravascular coagulopathy (DIC)

The invention relates to methods for producing catalytic antibodies displayed on a phage. The method comprises: (a) generating a gene library of antibody-derived domains; (b) inserting coding for the domains into a phage expression vector; and (c) isolating the catalytic antibodies. The phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The catalytic antibodies can be isolated by preparing an antigen, optionally immunising an animal with the antigen; generating a library of VH and VL domains from the immunised animal; cloning the VH and VL domains from the immunised animal; cloning the VH and VL domains into a phage expression vector to generate phage display
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Production of catalytic antibodies displayed on bacteriophages - comprises generating a gene library of antibody-derived domains inserting coding into a phage expression vector and isolating the catalytic antibodies.
                                                                                                                                                                  ö
    AAT04634 encodes AAR80087 human derived light chain RT3 phage antibody. The DNA was used in the prepn. of catalytic antibody (CA) producing bacteriophage. The CAs can be used to activate/deactivate a biological function in an animal by enhancing the rate of cleavage, or formation of a specific bond within a mol. in vivo

antibodies; selecting phage display antibodies which bind specifically to the antigen; screening the selected phage display antibodies for catalytic activity to substrate; and isolating the catalytic antibodies, where the phage expression vector incorporates a histidine peptide in tandem with a myc peptide. The processes are used to produce catalytic antibodies, which can be used for in vivo activation of a prodrug. Sequences AAW95484-489 represent genetic sequences of heavy and light chains of RT3 specific phage antibodies selected from a naive human phage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antibody library

diseases

WPI; 2001-282031/29. N-PSDB; AAS03444.

Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related diseases

Claim 1; Page 120; 182pp; English.

AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain, light chain,
and heavy chain complementarity determining regions (CDR) of the
invention. The antibodies can be used in the treatment of obesity and
cobesity related diseases. The antibodies can be used to deliver drugs or
pro-drugs directly to the fat mass of an obese patient or the antibody
can be used as a therapeutic itself. Antibodies binding specifically to
adipocytes can be used to activate the immune system to destroy the cells
by complement mediated lysis. The antibodies may be labeled with a
catectable label such as radiolabel, fluorescent or chemical group and
used in methods of diagnosis in human subjects e.g. to determine the
presence of adipocyte antigen on the surface of an adipocyte to detect or
determine the presence or level of adipocytes in a cell or tissue sample.
The antibodies can be used as an alternative means of treatment for obese
patients other than undergoing surgery to remove excess fat. Antibodies
for different types of fat deposits can also be produced e.g. intra-

consistency and monocortain antibody heavy chain, light chain, and many control and monocortain antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the and heavy chain complementarity determining regions (CDR) of the invention. The antibodies can be used in the treatment of obesity and coesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the far mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and detectable label such as radiolabel, fluorescent or chemical group and cued in methods of diagnosis in human subjects e.g. to determine the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies for different types of fat deposits can also be produced e.g. intra-abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related

AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain, light chain,
and heavy chain complementarity determining regions (CDR) of the
invention. The antibodies can be used in the treatment of obesity and
clobesity related diseases. The antibodies can be used to deliver drugs or
pro-drugs directly to the fat mass of an obese patient or the antibody
can be used as a therapeutic itself. Antibodies binding specifically to
can be used as a therapeutic itself. Antibodies binding specifically to
by complement mediated lysis. The antibodies binding specifically to
by complement mediated lysis. The antibodies binding specifically to
captioned as radiolabel, fluorescent or chemical group and
detectable label such as radiolabel, fluorescent or chemical group and
category antigen on the surface of an adipocyte to detect or
determine the presence or level of adipocytes in a cell or tissue sample.
The antibodies can be used as an alternative means of treatment for obese
patients other than undergoing surgery to remove excess fat. Antibodies
for different types of fat deposite can also be produced e.g. intraabdominal fat associated with heart disease

```
This polypeptide sequence comprises the light chain variable region (VL) of human carcinoembryonic antigen (hCEA)-specific antibodies CEA1, CEA2 and CEA1, WA (AAT7213-35) gene sequences were obtained for anti-hCEA antibodies CEA1(see AAW19876-85). A claimed specific binding member (A) comprises an hCEA specific antibody antigen binding domain that has a dissociation constant for hCEA of less than 1 x 10 -8 M, is non-cross-reactive with human liver cells, and preferentially binds to the A3-83 extracellular domain of hCEA and/or to cell-associated hCEA over hCEA over soluble hCEA. Preferred (A) include pairings of VH and VL variantes (A) is used to detect cells expressing hCEA, in vivo or in vitro, especially tumour cells for diagnosing cancer, e.g. adenocarcinoma of the colon, lung or breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Specific binding members for human carcinoembryonic antigen - bind to the A3-B3 extracellular domain of hCEA and are substantially non-cross-reactive with human liver cells; used for diagnosing cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                             ANU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain, light chain,
and heavy chain complementarity determining regions (CDR) of the
invention. The antibodies can be used in the treatment of obesity and
cobesity related diseases. The antibodies can be used to deliver drugs or
pro-drugs directly to the fat mass of an obese patient or the antibody
cor an be used as a therapeutic itself. Antibodies binding specifically to
adipocytes can be used to activate the immune system to destroy the cells
by complement mediated lysis. The antibodies may be labeled with a
complement mediated lysis. The antibodies may be labeled with a
detectable label such as radiolabel, fluorescent or chemical group and
used in methods of diagnosis in human subjects e.g. to determine the
copresence of adipocyte antigen on the surface of an adipocyte to detect or
determine the presence or level of adipocytes in a cell or tissue sample.
The antibodies can be used as an alternative means of treatment for obese
patients other than undergoing surgery to remove excess fat. Antibodies
for different types of fat deposits can also be produced e.g. intra-
abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain, light chain,
and heavy chain complementarity determining regions (CDR) of the
cinvention. The antibodies can be used in the treatment of obesity and
cinvention. The antibodies can be used to deliver drugs or
pro-trugs directly to the fat mass of an obese patient or the antibody
can be used as a therapeutic itself. Antibodies binding specifically to
adipocytes can be used to activate the immune system to destroy the cells
considered the presence of adiagnosis in human subjects e.g. to determine the
cused in methods of diagnosis in human subjects e.g. to determine the
considered the presence or level of adipocytes in a cell or tissue sample.
The antibodies can be used as an alternative means of treatment for obese
considered than undergoing surgery to remove excess fat. Antibodies
for different types of fat deposits can also be produced e.g. intra-
abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related

AAU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid
sequences of anti-adipocyte monoclonal antibody heavy chain, light chain,
and heavy chain complementarity determining regions (CDR) of the
twention. The antibodies can be used in the treatment of obesity and
obesity related diseases. The antibodies can be used to deliver drugs or
pro-drugs directly to the far mass of an obese patient or the antibody
can be used as a therapeutic itself. Antibodies binding specifically to
can be used as therapeutic itself. Antibodies binding specifically to
by complement mediated lysis. The antibodies binding specifically to
by complement mediated lysis. The antibodies binding specifically to
catipocytes can be used to activate the immune system to destroy the cells
by complement mediated lysis. The antibodies of destroy the cells
categories of a back as radiolabel, fluorescent or chemical group and
categories of adipocyte antigen on the surface of an adipocyte to determine the
categories can be used as an alternative means of treatment for obese
patients other than undergoing surgery to remove excess fat. Antibodies
contained the present of fat deposite can also be produced e.g. intra-
abdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antibody; adipocyte; heavy chain; light chain; obesity; fat; heart disease; complementarity determining region; CDR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Anti-adipocyte monoclonal antibody light chain, FAT 95.

can be used as a therapeutic itself. Antibodies binding specifically to adjocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a detectable label such as radiolabel, fluorescent or chemical group and used in methods of diagnosis in human subjects e.g. to determine the presence of adjocyte antigen on the surface of an adjocyte to detect or determine the presence or level of adjocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients of the unundergoing surgery to remove axcess fat. Antibodies for different types of fat deposits can also be produced e.g. intrasabdominal fat associated with heart disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New antibody that specifically binds neurokinin B, useful for preparing a composition for treating or preventing hypertension or preeclampsia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel antibody specifically binding neurokining. B. An antibody of the invention has hypotensive, and gynaecological activity, and may have a use in gene therapy. The antibody is useful for preparing a composition for treating or preventing hypertension or preclampsia. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antibody; neurokinin B; hypotensive; gynaecological; gene therapy; hypertension; pre-eclampsia; NKB.

The antibodies can be used in the treatment of obesity and obesity related diseases. The antibodies can be used to deliver drugs or pro-drugs directly to the fat mass of an obese patient or the antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Panel of specific binding members of antibody molecules which bind to whole adipocytes is used in the treatment of obesity and obesity related

RESULT 15
```

The invention relates to a novel antibody specifically binding neurokinin B. An antibody of the invention has hypotensive, and gynaecological activity, and may have a use in gene therapy. The antibody is useful for preparing a composition for treating or preventing hypertension or preclampsia. The present sequence is used in the exemplification of the invention. Gaps ., 0 Ouery Match 100.0%; Score 50; DB 0; Length 242; Best Local Similarity 100.0%; Pred. No. 0.056; Matches 11; Conservative 0; Mismatches 0; Indels Sequence 242 AA;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Issued_Patents AA:*

Patent No. 5977322
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: No. 5977322e1 High Affinity Human Antibodies to TITLE OF INVENTION: Tumor Antigens
NUMBER OF SEQUENCES: 141
CORRESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STREET: Two Embarcadero Center, Eighth Floor
CITY: San Francisco
STATE: California
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Publication No. US20050163777A1

GENERAL INFORMATION:

TITLE OF INVENTION: Antibodies that Specifically Bind to Neurokinin B

TITLE OF INVENTION: Antibodies that Specifically Bind to Neurokinin B

TITLE OF INVENTION: Antibodies that Specifically Bind to Neurokinin B

CURRENT PEPLICATION NUMBER: US/10/981,692

CURRENT PEPLICATION NUMBER: PG7/US03/16802

PRIOR FILING DATE: 2003-05-29

PRIOR FILING DATE: 2003-05-29

PRIOR FILING DATE: 2003-05-30

NUMBER OF SEQ ID NOS: 76

SOFTWARE: Petentin version 3.1

SEQ ID NO 40

LENGTH: 242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 1927, Application US/0980748

Sequence 1927, Application US/0980748

Publication No. US20030059937A1

GENERAL INFORMATION:

APPLICANT: Ruben et al.

TITLE OF INVENTION: Antibodies that Immunospecifically Bind BLyS

FILE REFERENCE: PF533

CURRENT APPLICATION NUMBER: US/09/880,748

CURRENT APPLICATION NUMBER: 60/212,210

PRIOR APPLICATION NUMBER: 60/212,210

PRIOR FILING DATE: 2000-06-15

PRIOR FILING DATE: 2000-10-17

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

INTERACTION WITH PTDINS(3,4,5)P3 AND INS(1,3,4,5)P4, TISSUE SPECIFICITY, AND SUBCELLULAR LOCATION.
PubMed=14690521;

Hanck T., Stricker R., Sedehizade F., Reiser G., Indentification of gene structure and subcellular localization of human centaurin alpha 2, and p42IP4, a family of two highly homologous, Ins 1,3,4,5-P4-/PtdIns 3,4,5-P3-binding, adapter

proteins.",
J. Neurochem. 88:326-336(2004).
-!- FUNCTION: GTPasse-activating protein for the ADP ribosylation
-!- FUNCTION: GTPasse-activating protein for the ADP ribosylation
-!- SUBUNIT: Binds phosphatedylinositol 3,4,5-trisphosphate (PtdInsP3)
and inositol 1,3,4,5-tetrakisphosphate (InsP4). Possesses a
stoichiometry of two binding sites for InsP4 with identical

affinity.
SUBCELLULAR LOCATION: Cytoplasmic. Constitutively associated with the plasma membrane. Excluded from the nucleus.
ALTERNATIVE PRODUCTS:

Event=Alternative splicing; Named isoforms=2; Name=1;

IsoId=Q9NPF8-1; Sequence=Displayed;

Isold=O9NPPB-2; Sequence=VSP_011180;
Note=May be due to a competing acceptor splice site. No
experimental confirmation available;
-1- TISSUE SPECIFICITY: Highly expressed in placenta, spleen, kidney,
skeletal muscle and adrenal gland. Weakly expressed in thyroid,
liver, heart, lung, small intestine, peripheral blood leukocytes.
Not detected in spinal cord, brain, stomach, trachea, colon, lymph
node and bone marrow.
-1- SIMILARITY: Contains 1 Arf-GAP domain.

C. -- FUNCTION: GTPase-activating protein for the ADP ribosylation

factor family (Potential).

C. -- SUBUNT: Binds phosphatidylinostcol 3.4.5-trisphosphate (PtdInsP3)

and inositol 1.3.4.5-tetrakisphosphate (InsP4). Possesses a

stcickhomercry of two binding sites for InsP4 with identical

affinity (By similarity).

C. -- SUBUNT: Contains 1 Arth Gamain.

C. -- SIMILARITY: Contains 1 Arth Gamain.

C. -- SIMILARITY: Contains 1 Arth Gamain. Mus musculus (Mouse). Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. NCBI_TaxID=10090; 25-OCT-2004 (Rel. 45, Created)
